
Progressus PSA: Power of the Platform

One cloud, one security model, one data model, and a common user interface for all your business and productivity applications.

Built on Microsoft Dynamics 365 Business Central and native to the Microsoft Intelligent Cloud, the most cost-effective platform for small and medium businesses. Easy to deploy, simple to configure and manage, and unique in how it can virtually eliminate the cost and complexity of deployment and integration.

The Microsoft Intelligent Cloud

The Microsoft Intelligent Cloud is built on Microsoft Azure and encompasses Microsoft Services including Office 365, Dynamics 365, PowerBI, Flow, and PowerApps plus AppSource, an ecosystem of approved and certified add-ons and applications.

Multi-language, multi-currency

The platform can support your business operations locally and globally regardless of your geography.

Secure, Private, and Compliant

The Microsoft Intelligent Cloud is an energy-efficient infrastructure spanning more than 100 highly secure facilities worldwide, linked by one of the largest networks on earth. Microsoft leads the industry in establishing clear security and privacy requirements and then consistently meeting these requirements.

Azure meets a broad set of international and industry-specific compliance standards, such as General Data Protection Regulation (GDPR), ISO 27001, HIPAA, FedRAMP, SOC 1 and SOC 2, as well as country-specific standards, including Australia IRAP, UK G-Cloud, and Singapore MTCS.

Rigorous third-party audits, such as those done by the British Standards Institute, verify Azure's adherence to the strict security controls these standards mandate.

Native Interoperability

Native interoperability between CRM, ERP, and PSA functionality, Microsoft PowerBI, Microsoft SharePoint, Microsoft Office 365 plus other Dynamics 365 and Azure-hosted applications means processes and data can flow through all apps and services with no coding or complex integration.

The platform's Common Data Service is an Azure-based business application platform that does the heavy lifting of bringing together your data so you can simply deliver insights and process automation that matter to you.

Integration beyond the Microsoft Intelligent Cloud is simple through easy to use, standard technologies like Microsoft Flow, Azure Logic Apps, and RESTful Web Services.

Modular and Extensible

Start with what you need and grow at your own pace to run your entire business in the cloud. You can add additional Microsoft Dynamics 365 apps for more comprehensive sales, marketing, customer service, field service, or talent capabilities and leverage pre-built applications through Microsoft AppSource, Microsoft's online marketplace for cloud business apps where the largest community of developers continues to extend the platform with new industry and business functionality.

You can use Power Apps and Microsoft Flow to compose new applications and simply extend existing business processes, or leverage Extensions 2.0 to develop more specialized or advanced functionality.

Take the first step!

We can help assess where you are and where you need to be.
